

Fan Director Studio — creator-branded boutique

Product

Design exploration, not production software. A fan collaboratively plans a custom creator commission. The AI Director helps clarify an idea, suggests only creator-approved catalog choices, explains deterministic price tradeoffs, and builds a Scene Card. Creator approves scope, price and delivery before payment. Payment and delivery stay on the creator's existing platform. No claims of integrated checkout or real AI in this mockup.

Brand and style

Fictional demonstration creator: Maya Atelier. Clearly identify as demo. No real creator assets supplied. Use a typographic wordmark, tasteful nonexplicit still-life reference photography (vintage lounge, flowers, soft studio lighting), no invented creator portrait. Primary style source is Superdesign luxury-focused-design-system: warm cream, dusty rose, editorial whitespace, fine rules. Adapt it to the user's accepted boutique direction: Cormorant Garamond serif headings, Inter sans-serif UI; never League Spartan or giant travel hero elements. Background #FDF8F3 ; panel #FFFFFF ; secondary #F5F0EB ; primary text/CTA #302720 ; muted text #70625C ; dusty rose #E4A4BD ; deep rose #84485D ; rules #DED3CB . No neon, gradients, glass effects, tiny unreadable utility text or low-contrast rose body text.

Layout and components

Desktop workspace max-width 1320px, generous 32px margins, 12-column grid. Two main columns: Director conversation 7, live Scene Card 5. Restrained rounded corners 12px, subtle shadows, fine dividers. Serif title 44px, subheads 28px; UI 14–16px with 1.5 line height. Controls minimum 44px targets. Dark espresso primary buttons, cream secondary buttons, rose selected tiles with dark text and explicit selected indicator. Focus rings, semantic buttons and text labels, not color-only states. Mobile stacks panels with sticky estimate/Scene Card button; no horizontal overflow. Motion 160ms transitions, honor reduced-motion.

Journey

Boutique entrance -> inspiration collection -> AI Director -> Scene Card review -> submitted -> creator review -> proposed changes or approval -> payment externally -> production -> delivered externally. Draft/submission/approval/payment are distinct. No payment is taken by this prototype.

Mark estimated prices and timing subject to approval. Boundaries apply to every option; assistant cannot override them or invent prices.

Initial draft screen

AI Director workspace, mid-conversation. Top Maya Atelier wordmark, Collection / Your studio / Saved ideas navigation, small Demo badge. Back to collection. Title 'A little inspiration. Entirely yours.' Subheading explains planning assistant. Four-step trail Idea / Details / Review / Send with Details active. Conversation: fan wants cinematic personal greeting under \$150; assistant suggests vintage lounge, cozy evening or backstage greeting; fan chooses vintage lounge; assistant asks longer video or richer setting; fan prefers setting. Show visual choices and concise suggestion for personalized opening, main greeting, closing. Text composer 'Tell the Director what you have in mind...', Send, Suggest an idea, Undo.

Live Scene Card titled Vintage Lounge Greeting. Three-minute video \$90 + lounge setup \$35 + personalized greeting \$20 = estimated total \$145. Budget \$150, \$5 remaining. Standard delivery included. Seven days after payment confirmation, subject to approval. Wardrobe is a creator-approved catalog choice, no explicit content. 'Within listed options' is distinct from 'Creator approved'. Available status: Draft. Edit links by fields. Primary CTA Review Scene Card, secondary Save idea. Small note: Reference imagery, not a preview of your order.

Show a creator boundaries details control explaining listed options and custom requests require review. Optional extra-minute selection costs \$40; if selected total is \$185 and UI states \$35 over budget with remove option. Do not imply actual AI, payment, saved database, or submission. Local demo interactions may switch selected chips, estimates and a Scene Card review panel with explicit prototype labels.

Future creator desk

Useful dense request queue with fan platform handle, request title, estimate, requested delivery and unresolved questions. Side-by-side card and decision controls Approve, Propose changes, Ask a question, Decline. Changed versions require fan acceptance. No auto-approval or false payment confirmation.
